

CARBON MANAGEMENT SERVICES

A New Way of Thinking

CARBON MANAGEMENT SERVICES

Tetra Tech's carbon management services focus on identifying, reducing, and strategically managing our customers' carbon footprint. Our services span customer operations (energy, environmental, and transportation), management (leadership), and finance (capital) to provide cost savings, manage regulatory impacts, institute operational efficiencies, develop new business opportunities, and drive corporate responsibility and reputation. These services support our customers' efforts to address global climate change and become carbon neutral — measures of whether an organization is green or sustainable. These objectives can be achieved by greening energy supplies, implementing opportunities for energy efficiency and resource conservation, using alternative fuels and transportation, sequestering and capturing carbon, and purchasing carbon offsets. Our experience in implementing these solutions has repeatedly proven that customers can reduce their carbon and environmental impacts and save money, while continuing to grow their business.

Climate Change and Strategic Management Consulting

Tetra Tech provides expert advice in state and U.S. climate policy, the Kyoto Protocol and other international policy, voluntary emissions registries, and carbon markets. We work with our customers to minimize the impacts of potential legislation on operations and to develop strategies to enhance business opportunities and corporate responsibility through services such as:

- Emission inventory and verification
- Regulatory compliance planning
- Policy and regulatory support
- Integrated, multi-media risk analysis and management
- Carbon market analysis
- Performance assessment
- Strategic planning
- Opportunity assessment
- Adaptation and change management

Business Perspective – Tetra Tech specializes in minimizing the impacts of and capitalizing on current and potential national and international climate change legislation.

Results – We have helped our customers save more than 1.5 million megawatt hours of electricity and more than 1 million tons of carbon dioxide.

Expertise – Tetra Tech is accredited by the California Energy Commission and the California Climate Action Registry as a Certifier and Technical Assistance provider.

Inventory Assessment

Tetra Tech is developing and implementing cutting-edge greenhouse gas (GHG) measuring and reporting practices for GHG mitigation, inventory, verification, and certification. We offer inventory assessment and certification services that include:

- Carbon and GHG inventory and verification
- Carbon, GHG, and renewable energy credit certification
- Carbon offset development and certification
- Benchmarking
- Sustainability reporting
- Asset development

Project Implementation

Tetra Tech brings the proven ability to support all aspects of design, construction, and operation. We deliver world-class expertise across the full range of carbon services, including green building design, wind energy, water, biofuels, and energy management projects. Our services include:

- NEPA/CEQA consulting
- Siting and permitting
- Installation
- Design-build
- Operation and maintenance
- Finance
- Turnkey solutions

Reduction and Management

Tetra Tech is reducing its customers' carbon footprint. We have consistently demonstrated the ability to optimize operations and generate cost savings across the energy, transportation, and environmental aspects of our customers' operations. In 2006 alone, Tetra Tech saved its customers more than \$20 million in operational costs — with more than half of the savings coming from no- and low-cost opportunities. We bring an integrated, systematic approach to maximizing existing and underused assets at our customers' facilities. Our services in this arena encompass:

- Energy audits and efficiency retrofits
- Retro-commissioning
- Renewable energy
- Resource Efficiency Management
- Green procurement and supply-chain management
- Sustainable design
- Alternative fuels and transportation
- Recycling and composting
- Carbon capture
- Carbon sequestration evaluation and management
- Emission and renewable energy credits

Business Solutions for a New Market

Today's dynamic carbon-constrained world requires innovative thinking and a fresh approach. Tetra Tech excels at bringing together cutting-edge technology and people to drive behavioral change, optimize business processes, improve efficiency, and reduce carbon emissions while saving money and recognizing revenue from nontraditional sources. Global climate change requires investment, action, and results; it also provides vast new opportunities for corporate differentiation in the world market through:

- Asset management and monetization
- Carbon and GHG trading
- Power generation
- New customer markets, products, and services
- Corporate responsibility and image
