Activated Sludge Process Control Troubleshooting Chart
Second Edition

This chart provides a systematic approach to diagnosing and resolving common issues in activated sludge systems. It includes a detailed legend, pressure definitions, and a flowchart that guides the user through various symptoms such as poor settling, low oxygen, and high effluent turbidity.

Biological Nutrient Removal Troubleshooting Chart
for suspended growth systems

This chart is designed to help operators identify and address problems in biological nutrient removal (BNR) systems. It covers issues related to nitrogen and phosphorus removal, including symptoms like low nitrogen removal efficiency and foaming. It includes an abbreviation definitions section and a pressure definitions section.

Common Activated Sludge Microorganisms Chart

This chart provides a visual reference for common microorganisms found in activated sludge. It includes a graph showing the relationship between oxygen consumption and time, and a grid of 48 micrographs showing various types of microorganisms such as ciliates, rotifers, and protozoa. A legend identifies each microorganism and its typical characteristics.
